Abstract

The auto will play an important role as a heavy secondary industrial pillar whose amount and sale amount is to be evaluated again here for the sake of promoting its strategic planning task in more than ten years, so the prevalent NEV (New energy vehicle) series can present one region and one nation's secondary industrial reformation at all for our engineer, scientist &specialists to chase together as an eminent new force one. The energy used in vehicle may transform into the renewable one from nature where the low-carbon one can be applied occupying the first leadership to sell from domestic market to overseas one sustainably and continually besides that those auto has low price advantageous privilege made in China. The market occupation may promote the more many electric car amount and y-o-y (Year over year) growth value as well to make knowing how to produce better and high-quality ones continually from our manufacturer to huge oversea market for acquiring more sale order and making the earth circumstance to be cleaner than former. We would create more those green automobiles to the world market for maintaining the benefit opportunity fist occupation continuously from ten year ago that China already master the key cutting-edge-field eg. chargeable battery performance and miles distance in light of one charging time from the south to north area. The hydrogen fuel battery is to be searching for from several decade years ago to occupy the future promise candidate position after more than decade years for our engineers and specialists to think about its future usefulness widely from now on. The BYD blade battery was found in March 2020 called as "Lithium iron phosphate" which has more powerful application in BYD vehicle types. That battery has adopted the best gravity ratio discharged capacity and has been fatigue life 1MKm and recycle life trial times attained above 3,000. So those advancement products can change the key limitation from traditional performance accounting for producing new &high technique to drive the current limitation capacities that may enhance the GDP value a certain. We should continue to develop those best performance largely from the laboratory to research &development entirely supplying chain through producing &searching sides collaborated relationship by them together.

Keywords: Sustainably, an innovation producing, China automobile companies' sale situation in October 2026

Article Citation: Run Xu, Jiaguang Liu, Zaixuan Li. (2026). An Innovated Searching for Expedited China Automobile Companies Sale Status in Oct 2026 by Sustainability. **IRGS Journal of Economics, Business and Management (IRGSJEBM),** Vol-1(Iss-2), 05-08.

1. INTRODUCTION

With regards to continuing to work the advancement science & technology the sophisticated product and following effectiveness may be birthed and advocated gradually and eventually. As a scientist he must proceed his searching to push new measures for the sake of updating the traditional theory & experiment largely. A paper might conclude in the entire big mind and subsidiary diversities to exhibit his performance in front of public readers that contains many sophisticated features and achievements during a certain time's innovation research. At the same time, the robot etc innovation machine can help us to process many things from workshop, public occasion to medical & even family, so that the as many as them need us to make continuously to help doing some key aspect like work as welding integrated-circuit chip, movement with materials & doing cuisine and housework even chat with older man. Therefore, the more robots made by factory are to afford the inestimable perspective for serving human being comfortably. We should constantly provide the substance & logical chip to maker for the sake of producing humanoid-robot specially and continually to realize the modernization and commercialization in near future. Some materials are to affect the product longevity and property so that more searching about it will be necessary through scientists and engineers who burden heavy responsibility for the sake of enhancing its performance and longevity besides its high-quality with low making cost.

The auto as an important secondary industry has an exceptional role in one province and country so that it is to be underscored one in national GDP value where the more amount and quality needs to be granted. There would be so many ones made by Chinese main manufacturer specially in NEV (new energy vehicle) that is now very prevalent in society market included the domestic one and abroad one. So that the abroad market requirement is to enhance year after year that means there is more orders by them to be given us to produce those electric ones sustainably. Following those international demands from various nations the new brands are to be urgently demanding and ascend its number from different models to different miles continuously. That the more many autos sell to abroad country means there may be more necessary provision from various provinces and cities makers frequently. Thereby, our steel industrial system can be endured a heavy experience whether it can tolerate the more and more launch quantity year by year. At the same time, the excellent performance can endure to what time so the sustainable research and those steel materials can maintain what degree. Probably after ten years whether the advantageously technical reservation can change Chinese auto into the world auto market subsequently for us to bear and make an endeavour breaking through the international brands. [1~20]

2. DISCUSSIONS

With regards to prevailing climate change and its result public sanitation the clean emitting substance must be decreased largely from current fossil fuel to renewable one eventually and gradually so the clear atmosphere may be created by ourselves accounted for

guaranteeing the earth circumstance eventually. The much endeavour would be done from company and government sides collaborative methods upon promise contract for better air atmosphere day by day urgently. As we knew the much carbon oxide etc. detrimental gas producing from flaming engine of motor like traditional one with gasoline and diesel where the energy resource may be exploited by us too much. If that petroleum can be used in other place like plastic product etc. high-molecule polymer the situation will be better in spite of their trash dealing still is a big problem. Thereby, the suitable dealing with the petroleum processed product may become a long-term matter meeting in front of us who can search for new useful plastic procedures and composition to make an innovation one at all that is about to become a highlight in future chemical industry. [21~23]

2.1 China auto companies' sale situation in October 2026

The Chinese motor company's sale amount in Oct 2026 analysis might afford 49 ten thousand~11 ten thousand accordingly in light of Figure 1 evidenced the former BYD exceding SAIC, Geely, Chery with 43, 31, 30 ten thousand correspondingly strong auto capacities by overseas. So, there would be four companies mentioned beyond 300,000.

Figure 1 Chinese motor company's sale amount in Oct 2026 analysis. [2]

The Chinese three motor company's sale amount in Oct 2026 analysis might afford 20 ten thousand~10.7 ten thousand accordingly in light of Figure 2 evidenced the former Chery strong auto capacities by overseas. At the same time, the sale amount would offer 29.5~31 ten thousand by them correspondingly to illustrate the Chery former highest making capacities. Moreover, the occupation could attain 52%~158% by them respectively shown the Geely highest occupation rate.

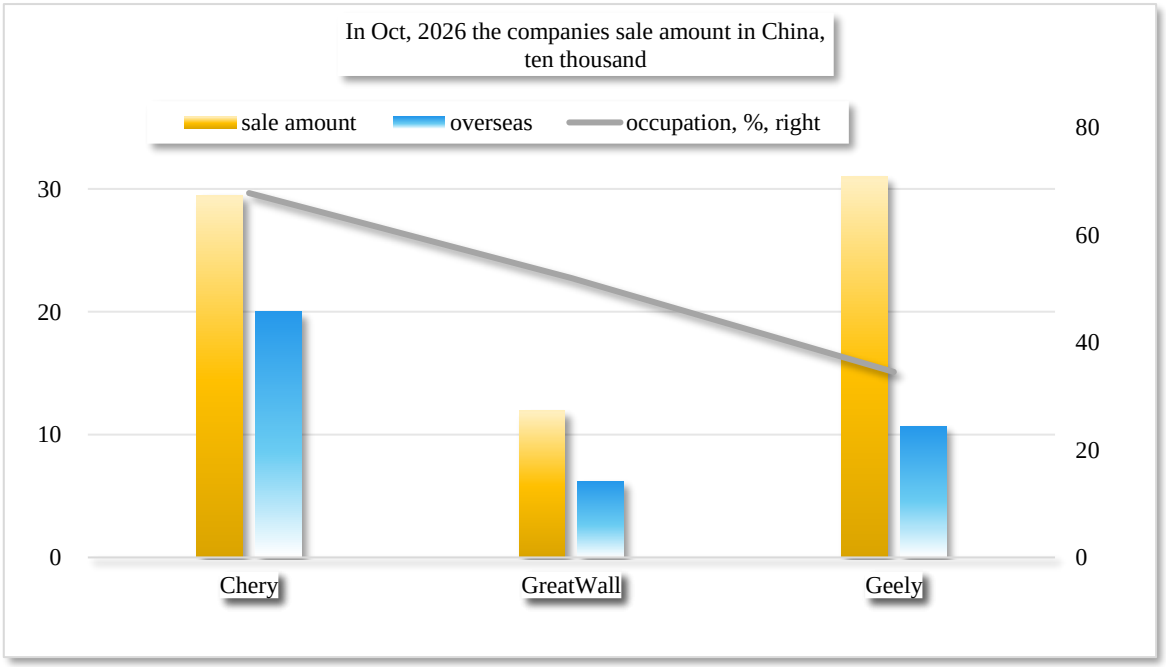

Figure 2 Chinese three motor company's sale amount in Oct 2026 analysis. [2]

2.2 The Dalian city &Jiangsu province cities GDP analysis

Moreover, the Dalian city &Jiangsu province cities GDP analysis might afford 3.8 billion yuan~1.4 billion yuan by Xuzhou city~Lianyungang city in 1981 accordingly indicate the former strong economy strength in light of Figure 3. The y-o-y value would offer 15%~16.6% by them correspondingly evidenced the Yancheng city the highest developed pace with 17.5%.

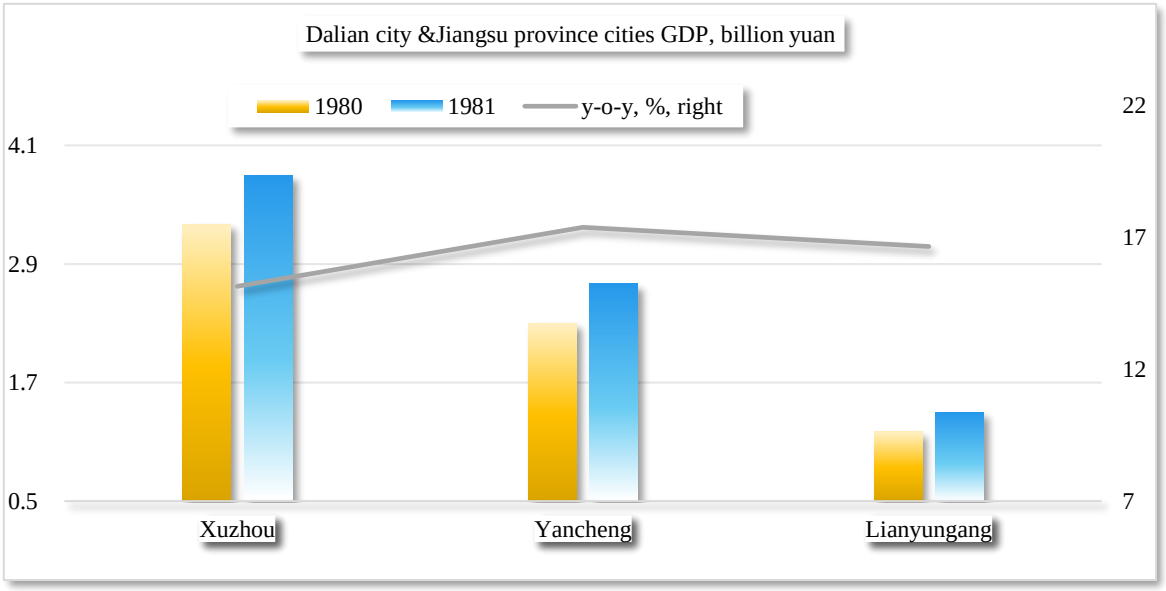

Figure 3 The Dalian city &Jiangsu province cities GDP analysis II. [1]

Furthermore, the Dalian city &Jiangsu province cities GDP analysis might afford 4.4 billion yuan~3.7 billion yuan by Nanjing city~Huaiyin city in 1981 accordingly indicate the former strong economy strength in light of Figure 4. The y-o-y value would offer 13%~19% by them correspondingly evidenced the Huaiyin city the highest developed pace.

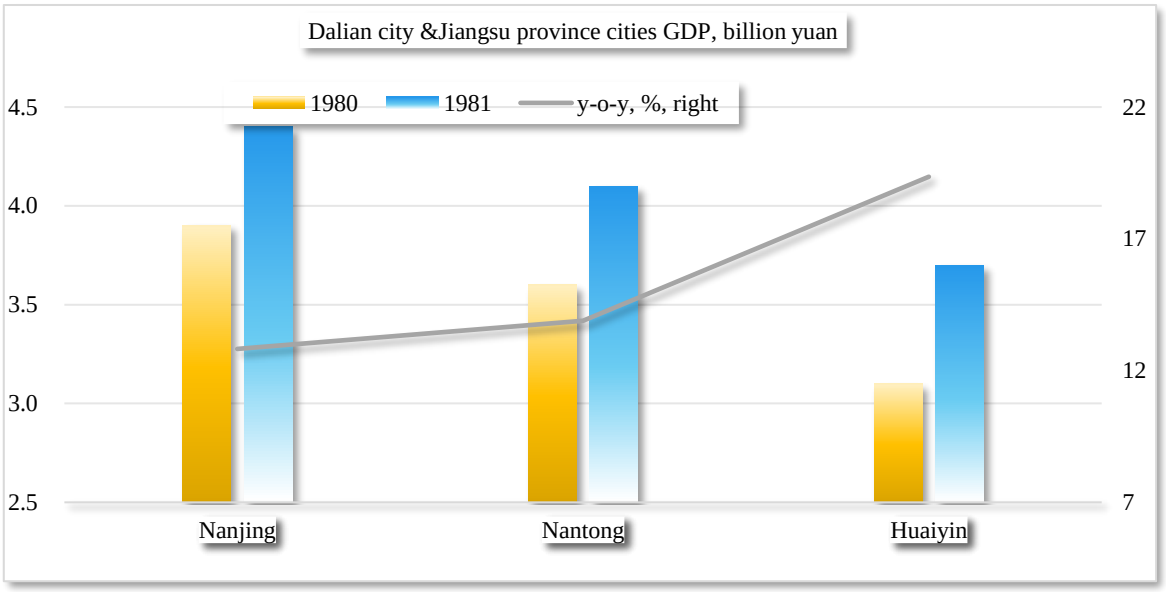

Figure 4 The Dalian city &Jiangsu province cities GDP analysis III. [1]

In summary, So the high-technique occupation will influence the GDP (Gross domestic product) value growth continuously from low one to high one for seeing the ultimately change varied from many years ago and other developed region &nations. It is considered that the high-technique business can be occupied what degree from initial one to moderate stage will be an important factor for us to think over the key growth speed except the GDP general amount. At the same time, the foreign trade exportation and importation may dominate additional significant effectiveness in transforming the secondary industry into tertiary industry whose effectiveness can exceed our original imagination and judgement. The more those high-technique products and equipment may lead to the pillar role in one region and nation total GDP value, therefore the more amount foreign trade exportation product will create more capital from dealing with those many products.

3. CONCLUSIONS

With surging time of technique seeking to change the world answer will be important task for us to chase due to meeting a new technique challenge with high and advanced mind to weapon our brain and bodies. The eminent role with the innovation one affords more sophisticated and directional task day be day through exerting our specialist and scientists actively act on exploring the new function sustainably. We should foster the excellent engineer from the research &development department in a maker and directly from the graduate in a good university for the sake of consisting in continuously workable capacity defined in a field. Therefore, the educating the talent from graduated in a better department may occupy a significant influence sustainably and constantly producing those new ones with better performance and quality for serving society urgently and immediately whose leader may pay more attention to educating those new graduates for choosing the best one having wisdom and brisk feature in the workshop. The more higher-level ones are to be owned the more advancement product can be produced by the department continuously produced now whose role may be directly hitting the destination as soon as possible. Thereby, the better from learning in college the more achievement can be acquired by the specialist leading in a manager position making us to know how those new ones may be worked all the course of items. The succeeding ones have to own himself method to be promoted from basis one to advanced one in a manufacturer with the help of the specialist advocating and approvals. On the other side, one team might form one task to produce the future new function product so that the many ones may be completed by a group to reserve more non-mature explorations waiting for the transaction by the managers for the sake of having a space time to balance the market requirement controlled the actual speed. From the sample to mature product the many joints can be passed through the sample producing trial

reviews reproducing until the best conditions may be attained besides that the customer is to be approved at all.
