Abstract

The auto will play an important role as a heavy secondary industrial pillar whose amount and sale amount is to be evaluated again here for the sake of promoting its strategic planning task in more than ten years, so the prevalent NEV (New energy vehicle) series can present one region and one nation's secondary industrial reformation at all for our engineer, scientist &specialists to chase together as an eminent new force one. The energy used in vehicle may transform into the renewable one from nature where the low-carbon one can be applied occupying the first leadership to sell from domestic market to overseas one sustainably and continually besides that those auto has low price advantageous privilege made in China. The market occupation may promote the more many electric cars amount and y-o-y (Year over year) growth value as well to make knowing how to produce better and high-quality ones continually from our manufacturer to huge oversea market for acquiring more sale order and making the earth circumstance to be cleaner than former. We would create more those green automobiles to the world market for maintaining the benefit opportunity fist occupation continuously from ten year ago that China already master the key cutting-edge-field eg. chargeable battery performance and miles distance in light of one charging time from the south to north area. The hydrogen fuel battery is to be searching for from several decade years ago to occupy the future promise candidate position after more than decade years for our engineers and specialists to think about its future usefulness widely from now on. The BYD blade battery was found in March 2020 called as "Lithium iron phosphate" which has more powerful application in BYD vehicle types. That battery has adopted the best gravity ratio discharged capacity and has been fatigue life 1MKm and recycle life trial times attained above 3,000. So those advancement products can change the key limitation from traditional performance accounting for producing new &high technique to drive the current limitation capacities that may enhance the GDP value a certain. We should continue to develop those best performance largely from the laboratory to research &development entirely supplying chain through producing &searching sides collaborated relationship by them together.

Keywords: Sustainably, an innovation producing, Chinese SUV quality exhibition comparison in 2026 Q3 analysis

1. INTRODUCTION

With regards to continuing to work the advancement science & technology the sophisticated product and following effectiveness may be birthed and advocated gradually and eventually. As a scientist he must proceed his searching to push new measures for the sake of updating the traditional theory & experiment largely. A paper might conclude in the entire big mind and subsidiary diversities to exhibit his performance in front of public readers that contains many sophisticated features and achievements during a certain time's innovation research. At the same time, the robot etc innovation machine can help us to process many things from workshop, public occasion to medical & even family, so that the as many as them need us to make continuously to help doing some key aspect like work as welding integrated-circuit chip, movement with materials & doing cuisine and housework even chat with older man. Therefore, the more robots made by factory are to afford the inestimable perspective for serving human being comfortably. We should constantly provide the substance & logical chip to maker for the sake of producing humanoid-robot specially and continually to realize the modernization and commercialization in near future. Some materials are to affect the product longevity and property so that more searching about it will be necessary through scientists and engineers who burden heavy responsibility for the sake of enhancing its performance and longevity besides its high-quality with low making cost.

The auto as an important secondary industry has an exceptional role in one province and country so that it is to be underscored one in national GDP value where the more amount and quality needs to be granted. There would be so many ones made by Chinese main manufacturer specially in NEV (new energy vehicle) that is now very prevalent in society market included the domestic one and abroad one. So that the abroad market requirement is to enhance year after year that means there is more orders by them to be given us to produce those electric ones sustainably. Following those international demands from various nations the new brands are to be urgently demanding and ascend its number from different models to different miles continuously. That the more many autos sell to abroad country means there may be more necessary provision from various provinces and cities makers frequently. Thereby, our steel industrial system can be endured a heavy experience whether it can tolerate the more and more launch quantity year by year. At the same time, the excellent performance can endure to what time so the sustainable research and those steel materials can maintain what degree. Probably after ten years whether the advantageously technical reservation can change Chinese auto into the world auto market subsequently for us to bear and make an endeavour breaking through the international brands. [1~20]

2. DISCUSSIONS

With regards to prevailing climate change and its result public sanitation the clean emitting substance must be decreased largely from current fossil fuel to renewable one eventually and gradually so the clear atmosphere may be created by ourselves accounted for

guaranteeing the earth circumstance eventually. The much endeavour would be done from company and government sides collaborative methods upon promise contract for better air atmosphere day by day urgently. As we knew the much carbon oxide etc. detrimental gas producing from flaming engine of motor like traditional one with gasoline and diesel where the energy resource may be exploited by us too much. If that petroleum can be used in other place like plastic product etc. high-molecule polymer the situation will be better in spite of their trash dealing still is a big problem. Thereby, the suitable dealing with the petroleum processed product may become a long-term matter meeting in front of us who can search for new useful plastic procedures and composition to make an innovation one at all that is about to become a highlight in future chemical industry. [21~24]

2.1 Chinese SUV quality exhibition comparison in 2026 Q3

The Chinese SUV quality exhibition comparison in 2026 Q3 would exhibit 15/ten thousand~25/ten thousand by Small SUV~Big SUV accordingly to manifest the Small Q3 least complaints with 13/10,000 vehicle best quality in light of Figure 1. The ones below 25/10,000 would include four that they were Small Q3、Big Q2 &Small Q3 with 13/10,000、25/10,000 &25/10,000 correspondingly following 2026 Q3.

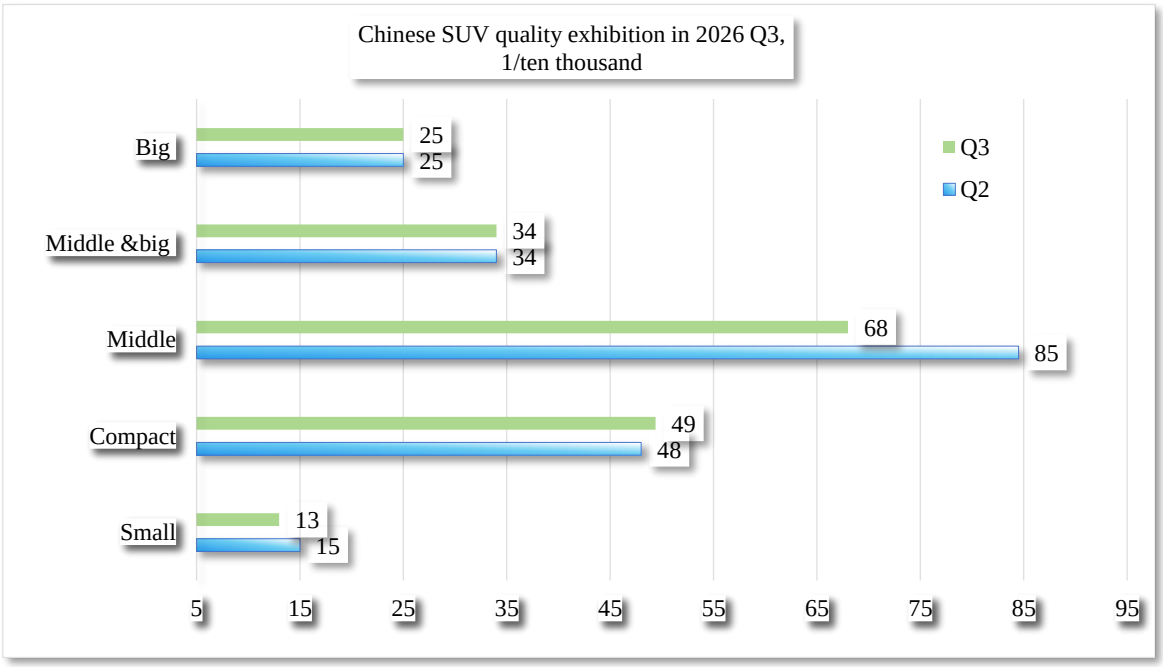

Figure 1 SUV quality exhibition comparison in 2026 Q3 in China. [1]

2.2 The nationwide resident's disposal income per capita in Q1~Q3 2026

The nationwide resident's disposal income per capita in Q1~Q3 2026 might indicate 190,000 yuan~340,000 yuan by rural resident~nationwide accordingly to evidence the city &town strong disposal income with 450,000 yuan in light Figure 2. The y-o-y growth value would afford 6.8%~5.3% by them correspondingly recorded the rural residents exceeding the nationwide average disposal income the highest developed pace.

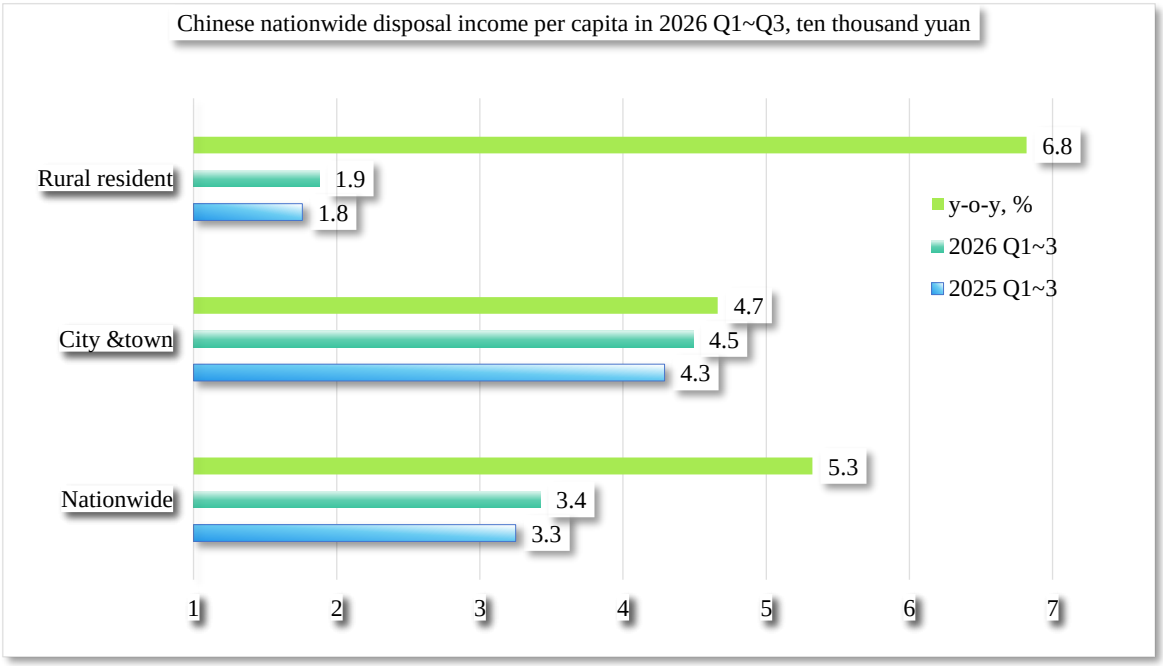

Figure 2 The nationwide residents disposal income in Q1~Q3 2026. [3]

2.3 The world innovation cities analysis in 2026

The four municipalities GDP analysis in 2026 Q1~3 might afford 4.3 trillion yuan~2.5 tril yuan by Shanghai~Chongqing city accordingly to evidence the former strong economy momentum in light Figure 3. The y-o-y growth value would afford 8.2%~5.3% by them correspondingly recorded the former exceeding the latter the higher developed pace.

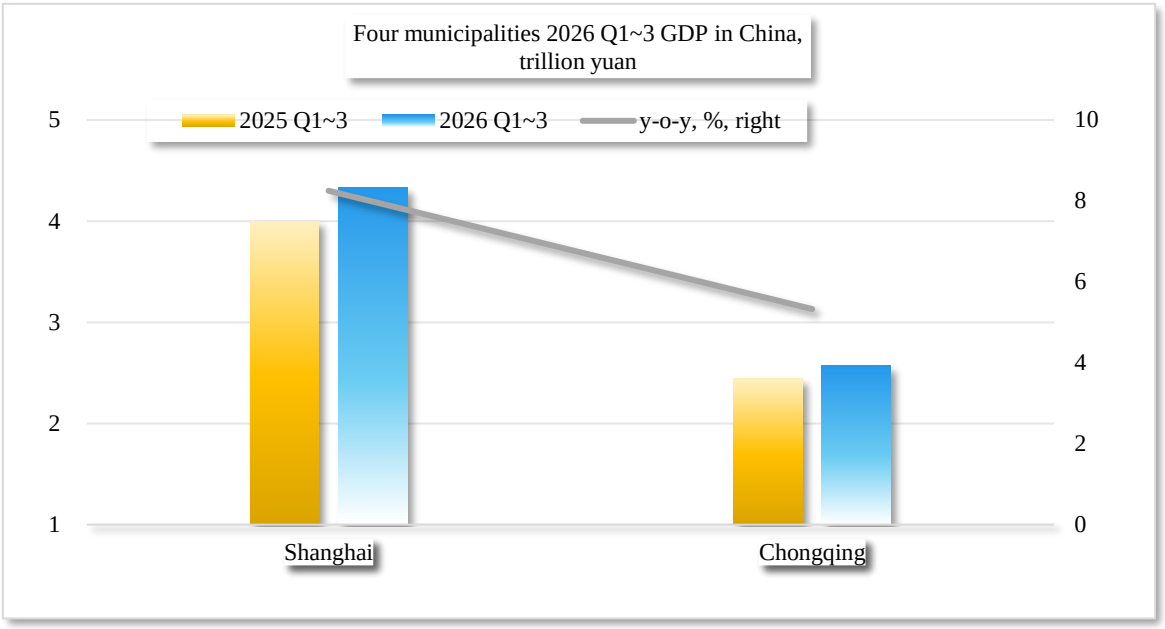

Figure 3 The four municipalities GDP analysis in 2026 Q1~3. [4]

Furthermore, the four municipalities GDP analysis in 2026 Q1~3 might afford 4 trillion yuan~1.4 trillion yuan by Beijing~Tianjin city accordingly to evidence the former strong economy momentum in light Figure 4. The y-o-y growth value would afford about 4% by both of them correspondingly recorded their moderate developed pace.

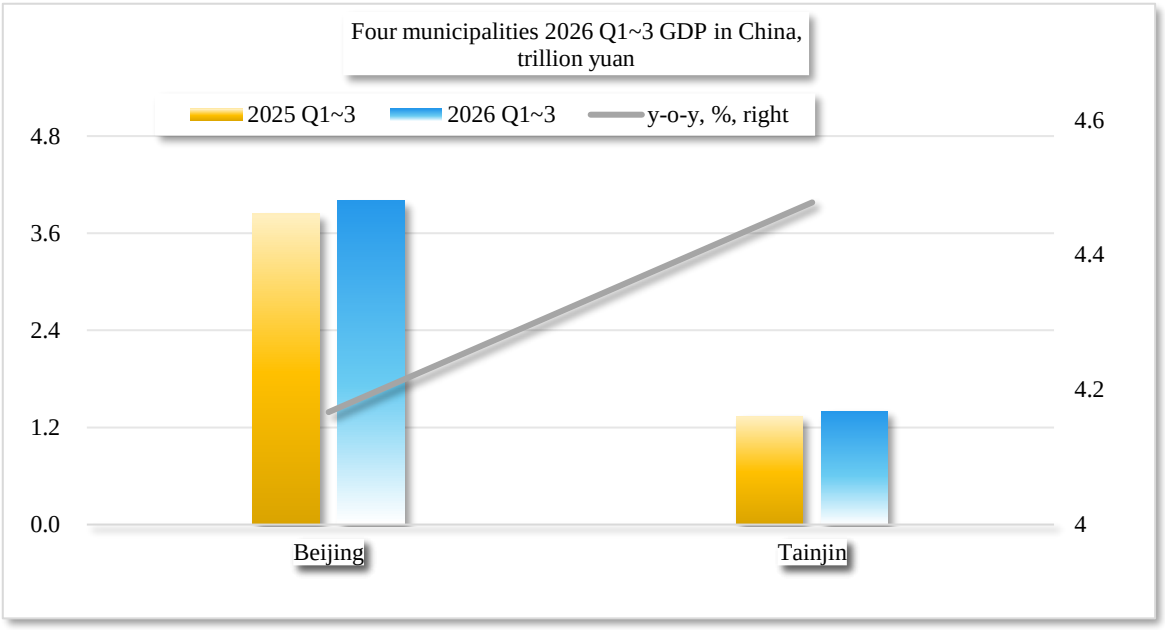

Figure 4 The four municipalities GDP analysis in 2026 Q1~3 I. [4]

In summary, So the high-technique occupation will influence the GDP (Gross domestic product) value growth continuously from low one to high one for seeing the ultimately change varied from many years ago and other developed region &nations. It is considered that the high-technique business can be occupied what degree from initial one to moderate stage will be an important factor for us to think over the key growth speed except the GDP general amount. At the same time, the foreign trade exportation and importation may dominate additional significant effectiveness in transforming the secondary industry into tertiary industry whose effectiveness can exceed our original imagination and judgement. The more those high-technique products and equipment may lead to the pillar role in one region and nation total GDP value, therefore the more amount foreign trade exportation product will create more capital from dealing with those many products.

3. CONCLUSIONS

The high-technique product will influence our live quality and convenience that it means the sustainably searching must be following through exerting the engineer, researcher &scientist effortful results from all of aspects at all. So, the scientist writes his achievement paper on high-factors-journal will meet the time requirement for sake of erecting the experimental result and subsequent modeling structure mutually to prove his result being correct within defined field. We scientist needs to explore and visit wider defining fields and fringe ones so as to occupy the advance position knew how to proceed his relevant searching on earth that may create many progression courses in his complete research area with relative multi-disciplinary fields. At the same time, some crossing-disciplinary subjects will be preceded continuously by scholars and many things about its new-approaching-behavior how it can promote the scientific progress forwards and make many achievements through wielding their deductively basic theoretical formula and experimental explanation correctly. About the further deepening course in academy searching for those non-matures and no-stabilized ones the scientist must precede its difficulty point conquered one by one to afford the power calculation capacity to build fitted ones to share together. On the other side, the research destination may be completed after its papers are to be published in

famous journal transformed into the automatic-product-line one that it will last much time and endeavor to push including the application product in actuality usefulness. Through continuously proceeding upgrade the mature product can be formed and produced gradually within lasting many years probably. The key-point-technique must be maintained inside grasping to reserve certain time to make its feasibility completely, then the technique will transform to published paper in journal that become the key role in exerting its influence towards expertise views with its product that it owns its new formality &functions.

Ethic Declarations

The authors declared that there were not conflicts of interest to disclose.
