Abstract

The green energy will present the recent high-technological level prevented the earth from largely utilizing earth reservation so that it destroys the energy source balance due to wasting those energy to exploit much that it may bring out the carbon-contamination gas emitting into atmosphere to be harmful to everyone health situation at all. Therefore, we continue to dedicate our efforts to the clean-environmental earth air commonly and cooperatively towards continually processing the expertise direction upon our engineer &specialists endeavour from focusing different units on resolving those matters met in front of us whose task may be urgent and important on contaminated air solutions developed by those experts in university and maker besides government constitution together. So that the many kinds of renewable &energetic measures will be processed in light of exerting those talents wisdom and practical behaviour and judgement in laboratory and research &development department protecting us from meeting the non-contamination-emission from auto that it can produce more HC(Hydrocarbon compounds) composition every day in despite of some new-energy-vehicle would be produced by our factory and subsequently industrial chain from down-stream to up-stream commonly and collaboratively. The new-reformation-one could be called as a survival competition between us and atmosphere in near future and long one besides where the more human being is to be invested currently, the more clean-air earth will be created in a consequence. Therefore, the more careful making corresponding strategic planning that can include many low-cost and high-efficiency product and equipment would be advocated and underscored by the subsequent government institution support for the sake of fostering a lot of promise industrial project and program together. Thereby, those renewable energy usefulness transformations can change and promote our economy GDP improvement that they create new opportunities and continuously create new functions from the basic to application ones through enough exerted our senior engineers and associate one even senior scientist in college eventually and collaboratively. So that the specialists need to pay more attention to for the sake of ultimately change our current automatic situation into artificial intelligence robotic industrialization where many things might be done and made like maintaining it and enhancing its multi-functions application to virtual and actual usefulness from the former to the latter gradually and eventually brought out new AI robotic worlds for us to utilize them together.

1. INTRODUCTION

The nations &regions GDP will represent their comprehensive strength in views of economy level and quality, so searching it may have an important effectiveness for us to process statistic with the national producing amount every month, season and year. In the meantime, the value with y-y has also a significant meaning that reflects the economy growth step because we should clarify the increasing change so as to evaluate the increasement and declination value precisely. The positive y-y value may mean the good and rapid economy developing status whilst the minus one may state the bad and slow economy step. So, we judge the economy developing enhancement and decreasement through that y-y value for a certain period. Thereby, the detail discussion will include in the following aspects. The GDP which indicates national economic status has provided an important role in every aspect in the world. So that the population increasing rate would be maintained for the sake of raising high-technique product with the entire industrial chain constantly which might enhance our new-quality-productivity. Hence, we should consider the effective factors for example the population quantity, new quality productivity with high-technique etc. like big plane, electric vehicle battery, AI robot, quantum computer, medicine making, disease diagnosis AI (artificial intelligence), ocean source, space exploration, nuclear generator, 5G communication etc. other ones. Low population enables to offer high life &quality with improving GDP per capita value. Meanwhile, it can enhance the national whole GDP value and help us to boost the economic recovery and many things to do. So, the certain population is about to improve our national confidence some degree and make us to become priority one as early as possible even the super-country to lead the world to leadership right. In contrast, the GDP with Chinese province and nation comparison can make our economy level to become high so the high-technique skill and experience may occupy the main factor to push our society forwards continuously for the sake of realizing modernization as early as possible. Meantime, the making capacity will be completed with modern industrialization for scale launching at all. We should also regulate the consumption expenditure and activity for thriving the economy situation forwards while the foreign trade exportation and importation will finish the foreign money accumulation for us to use in necessary and urgent moment. The regional variation needs to be balanced through “west electricity &east transit” and “east value &west computing” etc many factors. At the end, the Guangdong, Jiangsu, Shandong, Zhejiang having high GDP provinces will be learned carefully and study its background can help us to learn many useful methods to develop our modest provinces as soon as possible. [1~20]

2. DISCUSSIONS

The advanced equipment needs to be made largely in relevant maker knowing how to precisely predict the number in customers specially in oversea market demands from deducing current alignment allocation and distribution abroad. Therefore, the five years strategic planning even decade later one can be made by engineers and

specialists according to their experience in the past for the sake of ascending those potential devices sale number in future realized what to be produced and how many to be done. The manager might be according to those planning to make the detailing measure to complete it and subsequently the task making diagram so as to do actually in light of guaranteeing its exerting power to process the producing task for 12 months per year etc. with regarding preparation course in a conference in year-end, at the same time propose the fiscal years. On the focus on issue like the loaning capital for this year fiscal budget he must cooperate with the board of directs who might approve that fiscal budget from the bank for loaning the demand capital to company. Those fiscal year will include in the new factories and flow-line subsequently that may be passing through the board of directors for enhancing the capital investment and product per one with having cost declination. As for following the developed economy states the high-technique and investment will become an outstanding occasion for our chaser to utilize and study its cherish experience where the positive answer is to be given eventually. Meantime, the imitation can be another learning chance let us know how to deal with the advanced experience and theoretical approach in order to realize the modernization lifestyle to lead the world as a not neglected power to stand leadership to wield its role in the world issue urgently. [21~26]

Taipei & EU nations GDP analysis

The EU nations GDP analysis in 1962~1970 might indicate 166 billion dollars~45 billion dollars by West Germany~Espain accordingly in 1970 to illustrate the former West Germany strong economy strength in light of Figure 1. The y-o-y growth value would exhibit 27%~20.5% by them correspondingly to manifest the latter East Germany rapidly developed pace with 23.5% following West Germany. On the contrary, the France maintained the slowest pace with 13.5%.

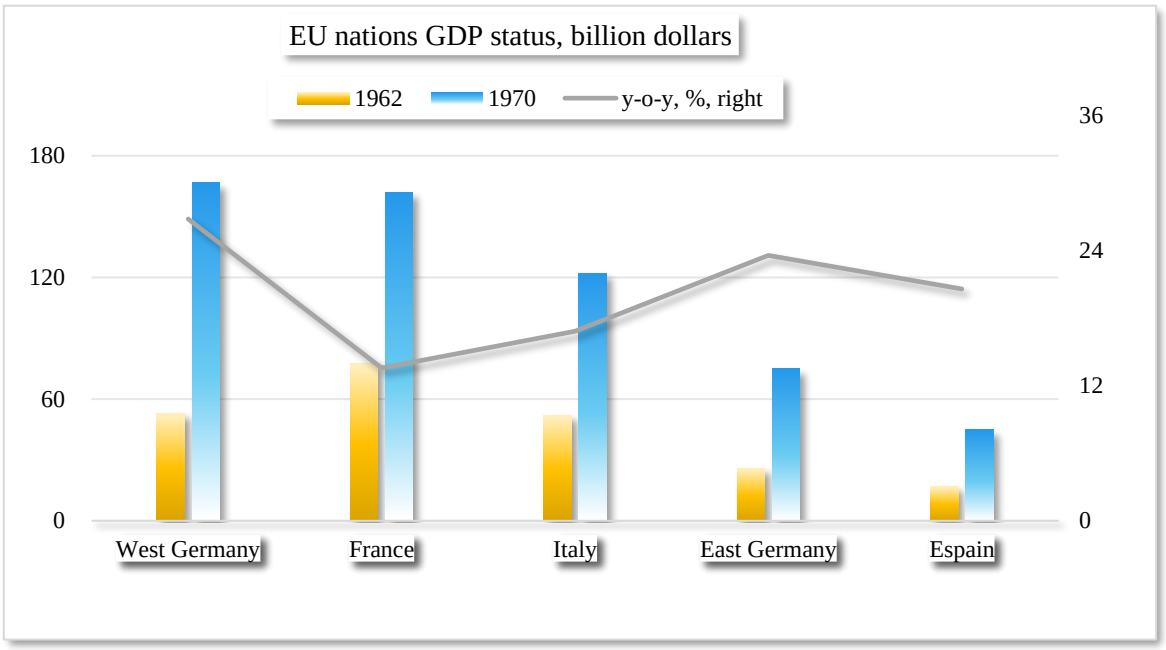

Figure 1 EU nations GDP analysis. [1]

Furthermore, the EU nations GDP analysis in 1962~1970 might indicate 43 billion dollars~17 billion dollars by Netherlands~Austria accordingly in 1970 to illustrate the former Germany strong economy strength in light of Figure 2. The y-o-y growth value would exhibit 23%~14% by them correspondingly to manifest the latter Netherlands rapidly developed pace following Poland with 32%. On the contrary, the Sweden, Belgium maintained the slower pace with 14.5%, 15% respectively exceeding Austria.

Furthermore, the Taipei &EU nations GDP analysis in 2006~2025 might indicate 1,035 billion dollars~461 billion dollars by Poland~Denmark accordingly in 2025 to illustrate the former Poland strong economy strength in light of Figure 3. The y-o-y growth value would exhibit 8.6%~2.7% by them correspondingly to manifest the former Poland rapidly developed pace exceeding Taipei with 6.9%. On the contrary, the Sweden maintained the slower pace with 2.4%.

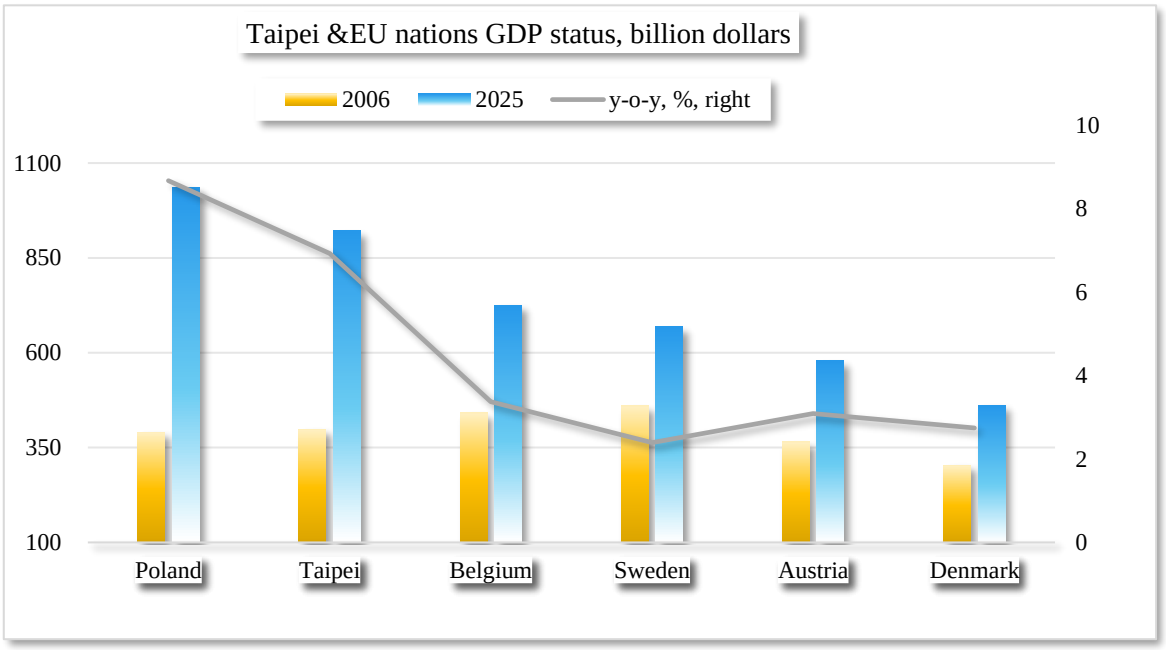

Figure 3 Taipei &EU nations GDP analysis in 2006~2025. [1]

Meantime, the Taipei &EU nations GDP analysis in 1999 might indicate 171 billion dollars~2,054 billion dollars by Poland~Germany accordingly to illustrate the latter Germany strong economy strength in light of Figure 4. The Francę Italy Espain maintained rapidly developed pace following Germany with 1,420 billion dollarș 1,192 billion dollarș 614 billion dollars occupying No twǫ threę four position respectively.

3. CONCLUSIONS

The interactive energy transformation will be made in order to meet new sustainability development in economy where all kinds of transforming one is to be wielded their efficiency looking forward to playing their effective roles for developing this sustainable project commonly. On the other side, the stock exchange market may be being taken part sustainability project which can be transacted with good effect within financial stocks exchange market. As for general person as a customer being entry stocks market may enable himself to transact with short term potential shares, in the end forming their benefit status among manufacturer and stock company like intermediary agent can be caused according to the principle of share and cost relationship. At the same time, the GDP in Chinese provinces &cities might show the moderate level and developed steps, so that through different cities between them the variation and changes would be sought that provides us the GDP value and y-y value goodness and badness for our experts and scientists to judge in high impact factor journal with achievement. Therefore, grasping that knowledge is about to encourage one region economy capacity for them to improve continuously economy developing course for the sake of attaining economic development for local economy status early. According to the variation depended on the local economy the corresponding strategic plan might be completed in detail. So that the west would proceed forwards lately due to their poor geography advantage after the east-beach provinces and cities development attains a certain level and capacities contributed to the boosting foreign trade mainly that might be exportation and importation important ports depending on the advantage geography

conditions. However, many usefulness could be processed from the west regions ie. “Western electricity is to transit to eastern ones” with transmitting with the super-high voltage. Another one would be the data algorithm in west ones for the huge computing capacity. We will erect many infrastructures and high-tech equipment investment and long strategic plan proposed by the corresponding institutions under government investigation. Many wind-turbine generator and photovoltaic generating electricity equipment may be built in the enough good geographic wind &solar that it creates best performance for us to utilize in family and factories even remote transmitting distance.
